

Bio-ITech launches eLabProtocols

Groningen, 01 September 2010

After several months of hard work, we are pleased to announce the launch of Bio-ITech's first online application eLabProtocols!!

eLabProtocols is a free online application that allows you to find and download the protocols you need to perform your experiments in the lab. Join eLabProtocols to organize, store your protocols and be able to share them with the members of your lab. Feel free to publish your protocols on eLabProtocols to share them with the rest of the scientific community and help to create an up to date online source for all protocols you need in the lab!! We hope that you will find our eLabProtocols useful and that you enjoy the services we provide. Please feel free to contact us and to send us your comments, suggestions and/or requests to improve our application.

eLabProtocols forms the basis of eLabJournal, a new and innovative online scientific platform that provides the tools for the secure and online storage your protocols, experiments, raw experimental data, samples and documents and much more. Use eLabJournal to communicate and share your data with the members in you lab or to collaborate with labs all over the world!.

About Bio-ITech

Bio-ITech was founded in January 2010 by Dr. Erwin Seinen en Dr. Wouter de Jong. Both founders used their knowledge gathered during their scientific career to develop software applications to manage and share data in laboratories.
